

# Integra-E2

SAF Tehnika with over 20 years of microwave point-to-point radio design and manufacturing experience is pleased to introduce the newest member of the Integra family of radios. The Integra-E2: Having the same Integra family characteristics of high-reliability, carrier grade features and performance, and 5-year warranty extends the Integra family into the E-band frequencies, delivering 10 Gbps capacity.

The Integra-E2 supports Adaptive Code Modulation and Bandwidth (ACMB) in which the coding rate, modulation and bandwidth changes are set in real time based on the link's conditions. This feature enables significant increase in payload capacity and link availability. ACMB switching is hitless, that is, the link stays locked, and data is transmitted without errors.

In most countries E-band radios are easy to deploy with no or minimal licensing requirements. Reducing time to deployment and reducing Total Cost of Ownership (TCO).

<sup>1</sup> The LDPC Forward Error Correction mode is the default one and recommended for all modulation schemes. Reed-Solomon Forward Error Correction is available for backwards compatibility.

<sup>2</sup> BPSK /2 means BPSK operation with a half of bandwidth, BPSK /4 means BPSK operation with a quarter of bandwidth.
